**DETAILED ACTION**

1. The text of those sections of Title 23, U.S. Code not included in this section can be found in the prior office action.
2. The prior office actions are incorporated herein by reference. In particular, the observations with respect to claim language and response to previously presented arguments.

***Response to Arguments***

3. Applicant's arguments filed 5/11/2006 and in view of Examiner initiated interview on 7/3/2006 have been fully considered and they are persuasive.

***Allowable Subject Matter***

4. Claims 1 –19 and 25-43 are allowed.
5. The following is a statement of reasons for allowance: Prior art's system and method singly or in combination are in contrast with specific steps of applicant's invention as described in detailed in remarks/response filed on 5/11/2006 by applicant and as recited in independent Claims 1 and 25.

Dependent Claims **2 – 19 and 26 – 43** as being independent upon Independent claims **1 and 25** and having additional allowable features therein.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".

7. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John M. Harrington, registration number 25,592 on July 03, 2006.

IN THE CLAIMS:

1. (Amended) A computer-implemented method of single sign-on user access to multiple web servers, comprising:

authenticating a user by a first web server, the first web server also providing a first type of service session functionality for the user in addition to and different from authenticating the user, creating an encrypted authentication token, and redirecting a web browser of the user to transmit the encrypted authentication token, which first type of service session functionality is also different from a second type of service session functionality provided for the user by a second web server that is not provided by the first web server, which second type of service session functionality is also in addition to and different from authenticating the user, creating an encrypted authentication token and redirecting a web browser of the user to transmit the encrypted authentication token, each of said web servers containing information identifying the type of service session functionality provided by the other of said web servers and an address for the other of said web servers;

detecting a client request for the second type of service session functionality for the user at said first web server that is not provided by the first web server, said first web server, for determining the second web server providing the second type of service session functionality for the user and in response thereto creating an encrypted authentication token related to the user and redirecting a web browser of the user to the second web server;

transmitting the encrypted token from the first web server to the second web server via the user's web browser, wherein the authentication token comprises an expiration time and is digitally signed by the first web server;  
authenticating the authentication token by the second web server; and  
providing the second type of service session functionality for the user to conduct a session by the second web server.

25. (Amended) A system for single sign-on user access to multiple web servers, comprising:

a means for authenticating a user by a first web server, the first web server also providing a first type of service session functionality for the user in addition to and different from authenticating the user, creating an encrypted authentication token, and redirecting a web browser of the user to transmit the encrypted authentication token, which first type of service session functionality is also different from a second type of service session functionality provided for the user by a second web server that is not provided by the first web server, which second type of service session functionality is also in addition to and different from authenticating the user, creating an encrypted authentication token and redirecting a web browser of the user to transmit the encrypted authentication token, each of said web servers containing information identifying the type of service session functionality provided by the other of said web servers and an address for the other of said web servers;

Art Unit: 2136

means for detecting a client request for the second type of service session functionality for the user at said first web server, said first web server that is not provided by the first web server, said first web server, for determining the second web server providing the second type of service session functionality for the user and in response thereto creating an encrypted authentication token related to the user and redirecting a web browser of the user to the second web server;

a means for transmitting the encrypted token from the first web server to the second web server via the user's web browser, wherein the authentication token comprises an expiration time and is digitally signed by the first web server;

a means for authenticating the authentication token at the second web server;  
and

a means for providing the second type of service session functionality for the user to conduct a session by the second web server.
